

# Flashless

## Useless Coding

useless.github.com/flashless — *A WebKit plug-in to display preview images for Flash based video services and block the rest.*

---

### Version 2.0.4

- Fix YOUTUBE download problem.
- Small bug fixes.

### Further changes since 2.0

- Fix a problem with YOUTUBE where users would see “Go Upgrade!” (Credit: ClickToFlash Developers)
  - Improved reliability when loading Flash. (Credit: ClickToFlash Developers)
  - Play videos with QuickTime by default.
  - Increased reliability of the BLIP.TV, FLICKR, TWITVID, VIMEO, and YOUTUBE services.
  - Increased performance and various usability enhancements.
- 

## Installation

MAC OS X 10.5 “Leopard” or later required.

Quit SAFARI. Drag the icon labeled *Flashless.webplugin* from the disk image to the icon labeled *Internet Plug-Ins*. You can now relaunch SAFARI. Done.

**Note:** This will install FLASHLESS for all users. To install just for the current user, copy *Flashless.webplugin* to ~/Library/Internet Plug-Ins instead.

## Usage

Flashless replaces all Flash elements on a site with an unobtrusive graphic. To show the original Flash object just click on the placeholder.

A preview image of the video is displayed for content from a supported video service. The name of the service is displayed in the lower right corner.

You can use these modifier keys:

<i>Command</i> .....	jump to original video site	<i>Shift</i> .....	play with Flash
<i>Option</i> .....	download the video	<i>Control</i> .....	show the menu

Not all features are available for all sites.
